**Sustainable Lighting Controls for Residences
and Commercial Building Commissioning**

Presented by:
Manny Feris, Lutron Electronics, Inc
Kyle Gotliebson, Square D, Inc.

This presentation will provide you with Sustainable Tools for Residential Lighting Control, as well as an overview of the Commissioning Process for Commercial Buildings. Participants will:

- Gain an overview of how controls can lower energy use while providing a variety of options for different at-home tasks, including family rooms, media rooms, home offices, exterior security lighting and daylight control for Residential Projects.
- Gain an overview of how to engage with local contractors for installation and training, as well as program “tweeking” on a long term basis.
- Understand how Commercial Commissioning is becoming ever more important to the success of ensuring that controls are installed and operated according to spec. Participants will learn how to start a project off with the right tools and how to design the project with controls in mind.
- Tips and pitfalls of end-of-project commissioning process.

To Register: Individuals can register, or join your colleagues at a participating IES Section Meeting on Wednesday, March 10, 2010 for an enhanced educational experience. Registration will start on Monday, Jan. 4, 2010.

Participating IES Sections will be listed with contact information. Duration: approx. 70 minutes, plus Q&A. Cost: **\$295** for the Live Event, **\$70** additional for optional access to On-Demand Recording (this price available only with registration for Live Event).

Participants are eligible for:

- 1.5 IES CEU / AIA LU credits
- Certificate of Attendance

If you are unable to attend an IES Section Meeting, you can order the On-Demand Recording from your own computer and phone for **\$295**.

For additional information, contact Pat McGillicuddy, IES Manager of Technology, at pmcgillicuddy@ies.org.
